Curriculum Vitae

Rui Fernando Faustino Bettencourt

Rui Fernando Faustino Bettencourt. Atua na(s) área(s) de Ciências da Engenharia e Tecnologias com ênfase em Engenharia Eletrotécnica, Eletrónica e Informática com ênfase em Robótica.

Identification

Personal identification

Full name
Rui Fernando Faustino Bettencourt

Gender
Male

Birth date
1996/04/09

Citation names

Bettencourt, Rui

Author identifiers

Ciência ID
5B18-8423-4C47

Email addresses

rui.bettencourt@tecnico.ulisboa.pt (Professional)

Telephones

Mobile phone
913517964 (Personal)

Knowledge fields

Engineering and Technology - Electrotechnical Engineering, Electronics and Informatics - Robotics and Automatic Control

Languages

Language	Speaking	Reading	Writing	Listening	Peer-review

Publications

Conference paper	1	Bettencourt, Rui; Lima, Pedro U.. "Multimodal Navigation for Autonomous Service Robots". Paper presented in *IEEE International Conference on Autonomous Robot Systems and Competitions (ICARSC), Santa Maria da Feira*, 2021. Published • 10.1109/ICARSC52212.2021.9429771
Journal article	1	BASIRI, MEYSAM; Gonçalves, João; Rosa, José Eduardo; Bettencourt, Rui; Vale, Alberto; Lima, Pedro U.. "A multipurpose mobile manipulator for autonomous firefighting and construction of outdoor structures". *Journal of Field Robotics* (2021): https://onlinelibrary.wiley.com/journal/15564967. Accepted
Thesis / Dissertation	1	Bettencourt, Rui. "Multimodal Navigation for Autonomous Mobile Service Robots". Master, Universidade de Lisboa Instituto Superior Técnico, 2019. https://fenix.tecnico.ulisboa.pt/cursos/meec/dissertacao/1691203502343554.

Activities

Supervision

	Thesis Title Role	Degree Subject (Type) Institution / Organization
2021/03/01 - Current	"People Recognition and Identification in Service Robots": The goal of this thesis is to create a method that, in a robust and efficient way, recognizes one or multiple people in their environment while also defining a specific unique ID for each person that will allow their identification and re-identification. This will not only allow the recognition of a specific person in a home environment with minimal pre-training, but will also allow a memory of previously seen people by the robot with new visitors detection. Co-supervisor of Vicente Pinto	Engenharia Eletrotécnica e de Computadores (Master) Universidade de Lisboa Instituto Superior Técnico, Portugal
2021/03/01 - Current	"Conversational skills for a service mobile robot targeting a STEM context": To develop a conversational system (also known as chatbot) for a mobile service robot to generate and sustain a conversation about the context of the robot state, with the goal of engaging youngsters in Science, technology, engineering, and mathematics (STEM). The main challenge will be the integration of the conversation context with the internal knowledge base of the robot. Co-supervisor of Verónica Spelbrink	Engenharia Informática e de Computadores (Master) Universidade de Lisboa Instituto Superior Técnico, Portugal

Event participation

	Activity description Type of event	Event name Institution / Organization
2021/06/22 - 2021/06/28	The RoboCup@Home Virtual competition aims to develop service and assistive robot technology with high relevance for future personal domestic applications. It is the largest international annual competition for autonomous service robots and is part of the RoboCup initiative. A set of benchmark tests is used to evaluate the robots' abilities and performance in a virtual home environment setting. The team finished third between ten international teams on the first stage, and fourth overall. Other	RoboCup@Home Virtual 2021 - Open Platform League Universidade de Lisboa Instituto Superior Técnico, Portugal

2020/09/21 - 2020/09/21	Talk on SciRoc Camp regarding good practices and lessons learned from previous robotic competitions as the team leader of SocRob@Home. The talk aimed to transmit knowledge to new robotic teams regarding the implementation in service robots. Symposium	SciRoc Camp GKK Symposium Universidade de Lisboa Instituto Superior Técnico, Portugal
2020/02/20 - 2020/02/25	International competition in collaboration with CATEC and the University of Sevilla in 3 independent challenges and a final challenge that incorporated the 3 previous challenges at the same time. The challenges consisted in structure construction, detecting fires and then putting them out. These challenges were completed by a team of cooperating autonomous UAVs and UGVs. Our team won, against 27 other teams from around the world, the challenge of detecting and putting out fires, corresponding to a cash prize of 250 000 USD. Meeting	MBZIRC2020 Khalifa University of Science and Technology, United Arab Emirates
2019/10/11 - 2019/10/13	HackUPC is a hackathon with over 700 students that gather for 36h to develop all sorts of projects, like mobile applications, hardware innovations, web solutions or even robotic implementations. Throughout the hackathon there are introductory and sponsor talks. Projects are judged based on technical difficulty, innovation and overall learning experience mainly, but also on their usability and design, by a panel of industry judges and UPC faculty. The project developed was a wep app that allows the user to send 5-second videos by IPFS. Other	HackUPC - 36 h Hackaton in Barcelona Universitat Politècnica de Catalunya, Spain
2019/09/16 - 2019/09/22	ERL Smart Cities was a robotics competition in Milton Keynes, England. This competition was created to demonstrate the latest state of the art in robotics to the population, by providing multiple scenarios in which many teams from around Europe participated. One of these scenarios consisted in a restaurant where the autonomous Unmanned Ground Vehicle had to act as a waiter, serving tables, taking orders, deliver the request orders and guiding customers to free tables. We finished third in this scenario,	ERL Smart Cities Milton Keynes Council, United Kingdom

	where I was responsible for the navigation. Other	
2018/04/21 - 2018/04/22	ValHacks is a student-run 24-h hackathon, powered by BEST Copenhagen. The objective of the event was to empower students by providing them with complementary education, activities and international exchange. ValHacks is organized by the members of BEST Copenhagen present at the Technical University of Denmark (DTU) and aims to bring Universities, Students and Companies closer together in a relaxed and creative atmosphere. The group where I was inserted developed an online solution to look for youtube live streams in a world map. Other	ValHacks - 24h Hackathon in Copenhagen Danmarks Tekniske Universitet, Denmark

Committee member

	Activity description Role	Institution / Organization
2020/05/28 - Current	RoboCup Portuguese Regional Committee - RoboCup@Home Technical Committee member Member	

Course / Discipline taught

	Academic session	Degree Subject (Type)	Institution / Organization
2020/09/21 - 2021/01/27	I helped teaching the Autonomous Systems course as a Teaching Assistant (TA), a course that introduces some fundamental Robotics concepts to master students. The function of TA consisted in helping with 3 classes every week of one and a half hours to help and evaluate students with their projects as well as office hours for any additional questions. The students of this course learn the concepts of localization, mapping and simultaneous localization and mapping in the presence of uncertainty in the measurement and motion models of robot systems.	Engenharia Eletrotécnica e de Computadores (Mestrado integrado)	Universidade de Lisboa Instituto Superior Técnico, Portugal
